Description	STERICERT® 1 sample vials are square media bottles with a threaded neck. They are made of transparent, uncolored polyethylene terephthalate G copolymer (PETG) and a loosely twisted screw cap made of uncolored polyethylene (HDPE). STERICERT® 1 PETG sample vials are firmly closed. Five bottles are together welded in one transparent plastic bag and finally radiation-sterilized. The vials are sterile inside and outside.		
Storage / Suitability	Suitable for deep freeze storage down to -40 °C and not autoclavable		
Toxicity	The bottles and caps are non-cytotoxic and meet USP Class VI regulations		
Chemical resistance	They are perfect for storage and sample preservation of active pharmaceutical ingredients and intermediate products. They are also used in the production and storage of buffers and cultures or in the long-term storage of pH-sensitive liquids such as culture media.		
Specification			
Sterility	The bottles and caps are certified gamma sterilized (SAL 10-6), sterilisation method: gamma-irradiation-sterilized, 25 kGy
